* The above facilities can accept upstream oilfield waste from various site and various generators

SFW = Surface Facilities associated with a disposal well (class 1b or 1a): Receiving system for oilfield waste prior to deep well injection.
SFC = Surface Facilities associated with a cavern: Receiving system that enables slurring of oilfield waste into a cavern.

ERCB APPROVED THIRD PARTY OILFIELD WASTE MANAGEMENT FACILITIES

Updated: February 1, 2012

LF = Landfill (class 1a, 1b, II or III): Final disposal location for solid oilfield waste that involves the disposition of waste material into a cell and then capping the cell upon closure.

WPF = Waste Processing Facility: Normally tanks used for purposes such as neutralization of materials, solids processing and hydrocarbon extraction. Facility may also include deep well injection of fluids and cavern disposal.

BF = Biodegradation Facility: Enables the removal of hydrocarbon contamination from soil by optimizing environmental conditions for microbial activity.

TS = Transfer Station: Provides short term storage for 3rd party oilfield waste and, if approved, non-oilfield waste which is later transferred to an appropriate facility for processing.

CT = Custom Treater: Separates oil/water emulsions received directly from well licensees, and treats the oil to meet pipeline specifications. Facility may also include deep well injection of fluids.

WT = Waste Transfer Area: Provides short term storage for 3rd party oilfield waste and, if approved, non-oilfield waste which is later transferred to an appropriate
